

**PUMPLOGIC**

## **WiFi "No Internet" Warning**

---

Because PumpLogic runs its own local network with no internet, your phone may display a warning after connecting. **You must stay on PumpLogic's WiFi** to access the control panel.

---

### **iPhone / iPad**

You will see a prompt with two options:

- **Use Cellular Data**
- **Keep Wi-Fi (Without Internet)**

**Always select "Keep Wi-Fi (Without Internet)".**

*If you select "Use Cellular Data," your device will disconnect from PumpLogic and you will not be able to access the control panel.*

---

### **Android**

You may see a notification such as:

"This network has no internet access — stay connected?"

**Select "Yes" or "Keep Connection" to remain on PumpLogic's network.**

*Some Android devices may silently switch back to mobile data. If the control panel stops loading, check that you are still connected to the PumpLogic WiFi network in your device's WiFi settings.*
